Comment Table, Multi-Species Conservation Strategy

Comment Number	Chapter/ Sub - Chapter	Page Number	Paragraph, Figure, or Table No.	Commentor/ Agency	Comment	
1	1	1-1		Allen/USBR	in my copy, pages 1-1 and 1-2 appear after 1-4	
2	3	3-3, 3-4	Table 3-1	Allen/USBR	in the text on 3-3, paragraph 3.2, it is stated that the Rx for each species provides habitat or population <i>targets</i> , yet for Central Valley fall-run chinook salmon, Suisun ornate shrew, valley elderberry longhorn beetle, Lange's metalmark butterfly, soft bird's-beak, Antioch Dunes evening primrose and several others, no targets are listed. Instead, a restating of the goals for recovery are listed. How could someone measure success if no targets are listed? Targets are not defined at the beginning of the document but generally a target is specific enough to measure success or failure.
